COM-Port unter Linux ansteuern

```
#include <stdio.h>
#include <string.h>
#include <unistd.h>
#include <fcntl.h>
#include <termios.h>

int com_port;
//char get_buffer[9];
const char* get_buffer;

int init_com() {
    struct termios options;
    //COM1
    com_port = open("/dev/ttyS0", O_RDWR | O_NOCTTY | O_NDELAY);
    if (com_port == -1) {
        printf("send_to_com: Unable to open /dev/ttyS0!\n");
        return -1;
    } else {
        fcntl(com_port, F_SETFL, 0);
    }

    //get the current options for the port
    tcgetattr(com_port, &options);

    //set the baud rates to 4800
    cfsetispeed(&options, B4800);

    cfsetospeed(&options, B4800);

    //enable the receiver and set local mode
    options.c_cflag |= (CLOCAL | CREAD);

    //set the new options for the port
    tcsetattr(com_port, TCSANOW, &options);

    #ifdef DEBUG
    printf("/dev/ttyS0 was opened successfully!\n");
    #endif
}
```

```
#endif
return 0;
}
