chown/chgrp für Symlinks

für das Ändern des Besitzer oder der Gruppe eines Symlinks gibts einen speziellen Parameter für chown oder chgrp.

Mit -h oder –no-dereference läßt sich einschalten, dass direkt der Symlink angefasst werden soll anstatt der referenzierten Datei:

```
# cd /var/lib/mailman
# ls -l

total 24K
lrwxrwxrwx   1 root root   24 May 19 16:40 Mailman -> /usr/lib/mailman/Mailman
