mysqltuner - MySQL Performance Tuning Check-Script

MySQLTuner ist ein Perlscript, das versucht die MySQL Konfiguration zu prüfen und Vorschläge zum Tuning auf Basis der laufenden Installation zu machen.

Installation:

```
wget -O mysqltuner.pl http://mysqltuner.pl,

chmod u+x mysqltuner.pl
```

Ausführung:

```
./mysqltuner.pl

                                                                 Di 27.

    -------- Recommendations
    -----------------------------------------------------------------------
    General recommendations:
        We will suggest raising the 'join_buffer_size' until JOINs not using indexes are found.
                See https://dev.mysql.com/doc/internals/en/join-buffer-size.html
                (specially the conclusions at the bottom of the page).
    Variables to adjust:
        join_buffer_size (> 4.0M, or always use indexes with JOINs)
```
